PROFESSIONAL SUMMARY

Software Engineer with experience building scalable backend systems using Python (Django, Django REST Framework) as a primary stack, plus Go for high-performance services. Skilled in REST APIs, microservices, eKYC and fintech workflows, payment integrations, and PostgreSQL/SQL optimization using Django ORM, Flask, FastAPI, Gin, and GORM. Strong in Docker-based deployment and reliable transaction systems.

WORK EXPERIENCE

Backend Developer **Jun 2026 – Present**

BlackLight Studio Works Pvt. Ltd., Noida, Uttar Pradesh, India

- Built and maintained multiple **Python, Django, and Django REST Framework** microservices with **Django ORM** schema migrations, including a multi-account **Google Ads API** management backend with gRPC connection pooling, **GAQL**-based reporting queries, and Play Store/iTunes metadata integration.
- Designed a three-tier authentication system (API key, per-app-signed end-user JWT, admin JWT) for an in-app support ticketing platform, preventing cross-tenant token replay, and integrated **Cloud Vision SafeSearch** for moderation.
- Replaced **Firebase Dynamic Links** with a custom smart-link resolver supporting platform-aware deep linking and async click tracking, and built game backend services with dual guest/Google authentication, an A/B experiment framework, and **S3**-backed asset delivery.
- Leveraged **AI-assisted development tools** (Claude, Codex) across SDLC for coding, code review, and debugging.

Software Engineer **Apr 2025 – Apr 2026**

Invsify Technologies Private Limited, New Delhi, India

- Developed and optimized **Python Django microservices** for fixed deposit and stock transaction workflows, improving API response time by **20–25%** through **PostgreSQL/SQL tuning**, indexing, and **Django ORM** query optimization.
- Designed **RESTful APIs** for SIP workflows using **Python, Django, and Django REST Framework**, including **Razorpay** integration for mandates, payment initiation, and automated transaction processing.
- Containerized microservices using **Docker** to standardize deployments and improve consistency across environments.
- Built **FSM-based** user journey flows for multi-step financial flows, improving state transitions and rule validation.
- Improved SIP scheduling reliability through better **cron** execution, exception handling, and retries, reducing transaction failures by **10–12%**.
- Built **Celery** + **Redis** background tasks for asynchronous SIP transaction processing and payment status updates, with retries, backoff, and idempotent design.
- Engineered the **eKYC onboarding pipeline** using **Python Django microservices**, reducing customer onboarding turnaround time by **25–30%**.

Junior Software Engineer **May 2024 – Apr 2025**

Almondz Global Securities Ltd., New Delhi, India

- Engineered the end-to-end **Django-based eKYC backend workflow** covering **PAN validation**, document parsing, biometric verification, and exchange submission APIs, improving account opening success by **∼40%**.
- Designed and maintained **Django-driven** customer onboarding logic aligned with **SEBI, NSE, and BSE compliance** requirements as a primary backend contributor for eKYC modules.
- Developed **Django** back-office modules for personal detail updates, bank account management, account closure requests, and related internal operations.
- Implemented segment activation workflows in **Django** for **Mutual Funds, Currency, and Equity Derivatives** with validation rules, status tracking, and API integrations.

TECHNICAL SKILLS

- **Languages:** Python, Golang (Go)
- **Frameworks:** Django, Django REST Framework, Celery, Flask, FastAPI, Gin, GORM
- **Databases:** PostgreSQL, MySQL, Redis
- **Cloud & Tools:** AWS (S3, EC2, Lambda), GCP, Git, Docker, Linux, Atlas
- **Domain & Concepts:** eKYC Systems, Payment Gateway (Razorpay), Trading Platforms, Account Aggregator, REST APIs, Microservices, FSM, WebSocket, Agile, CI/CD
- **AI Tools:** Claude, Codex

PROJECTS

gorm-dbobjects — GitHub: Go library built on GORM enabling triggers, views, and stored procedures to be defined as type-checked Go code, auto-generating SQL for Postgres, MySQL, SQL Server, and SQLite.

OCR System — GitHub: Python OCR system using OpenCV and Tesseract for scanned document text extraction.

EDUCATION

B.Sc (Hons) Mathematics, Motilal Nehru College, Delhi University **2019 – 2022**

CERTIFICATIONS

Python Programming Expert, Edureka **Mar 2023**
